

dr. joseph sgroi

MBBS FRANZOG MREPROMED

OBSTETRICIAN | GYNAECOLOGIST | IVF & INFERTILITY SPECIALIST

## Ovulation Induction

Some women have irregular periods, therefore being able to predict when ovulation occurs is often difficult.

Dr Joseph Sgroi will administer fertility drugs to facilitate the recruitment of one follicle and hence the production of one egg. transvaginal ultrasounds will be conducted to monitor the development of the follicle and the lining of the uterus and blood tests obtained to check hormone levels.

Dr Sgroi will advise you when it is best to have unprotected intercourse so as to maximise your fertility window.

The fertility drugs Dr Sgroi will prescribe you are:

- Follicle Stimulating Hormone (FSH)
- Clomid (Clomiphene Citrate)
- hCG (human Chorionic Gonadotropin)
-
